

# Steel floor vs. Hopper Cone

“It comes down to dollars and cents”

When considering upgrading your older floors , it is important to take the following into consideration.

### Labor costs

Example: If you only fill/empty the bin one time per year then the labor costs can be quite low

### Capital costs

Example: How much is the price of the Steel floor or Hopper cone going to cost and what the payback is going to be in return on your investment and CONSIDER if your spending too much on a outdated bin.....One might want to just consider new hopper bins as it might be less cost per bushel of storage when it is all said and done (Especially on smaller diameter bins)
